

Romero General Construction Corp.

General Engineering Contractor · License #657359 · 8(a) SDB Certified

We appreciate this opportunity to introduce our company and look forward to working together in the future.

History

Romero began operating in 1992 and was designated a Small Disadvantaged Business through CALTRANS. Through the CALTRANS DVB program, Romero quickly established itself as a leader in the southern California construction industry by successfully completing numerous highway, dam, and airport construction projects. The company has since graduated from the DVB program, but continues to deliver on-time, on-budget projects to government agencies and reputable contractors.

Recently, Romero was certified by the federal government as an "8a SDB" firm and was quickly accepted into the Basic Order Agreement (BOA) program for the Navy Southwest Division. Under the BOA program, Romero successfully performed contracts for general engineering, asphalt paving, and design build projects.

After the initial BOA through the Southwest Division, Romero has continued the tradition of quality workmanship and excellent client relationships through a variety of large projects and programs, including POCA contracts through the Army Corps of Engineers, IDIQ contract through the U.S. Air Force, and multiple JOCs through the Southwest Division.

Success

The success Romero has had in the public works and federal sector of the construction industry has provided the company with several unique advantages, including cost savings in building and street improvements, while providing a superior quality product. Romero has strong financial backing and bonding capabilities essential to performing high-profile, large-budget projects, yet maintains a focus on client relationships and service.
